Sorry to bother you all. Looks like our office of comms found references to this in the media tonight, so it sounds like it is public info.

Thanks. Lora

Can any one tell me of this updated amount of PPH in the MCHM spill that Melissa shared below is public information yet or not?

CDC is thinking about updating the sentence on our website that refers to this percentage, but I have been asked to confirm if this is public info yet or not.

Our website currently has:

"PPH represented a relatively small percentage (approximately 5%) of the total volume in the tank."

We could update it to:

"PPH represented a relatively small percentage (approximately 7.3% by weight) of the total amount in the tank."

Thanks for any info you can provide. Lora

Would think not but best you folks answer..... certainly someone is going to ask if this

percentage increase is significant or inconsequential.....

Will that change the ATSDR assessment? Is this it, or is the target going to move again? Thx

Subject: Update on amount of PPH in the MCHM spill

Hi Fran,

The Freedom Industries President just told Mike Dorsey that there is 7.3% PPH instead of the reported 5.6% given yesterday.

So the contents of tank 396 is 88.5% crude MCHM, 7.3% PPH, and 4.2% water (percent by weight, not volume as previously stated) reported as a requirement of the WV DEP Order issued this morning to the facility.

Thanks,

Melissa
